Designing a Bespoke Engagement Ring: From Concept to Creation

LEON MEGÉ

A Step-by-Step Guide

MAISON LEON MEGÉ

Introduction

I welcome you at the onset of your journey toward a perfect engagement ring. For more than 30 years, we have set the benchmark for craftsmanship in bespoke jewelry.

I value your trust in our expertise and experience, which elevates every ring we make from ordinary to truly exceptional. Our work reflects uncompromising quality, refined artistry, and enduring construction that cannot be matched by standard jewelry workmanship.

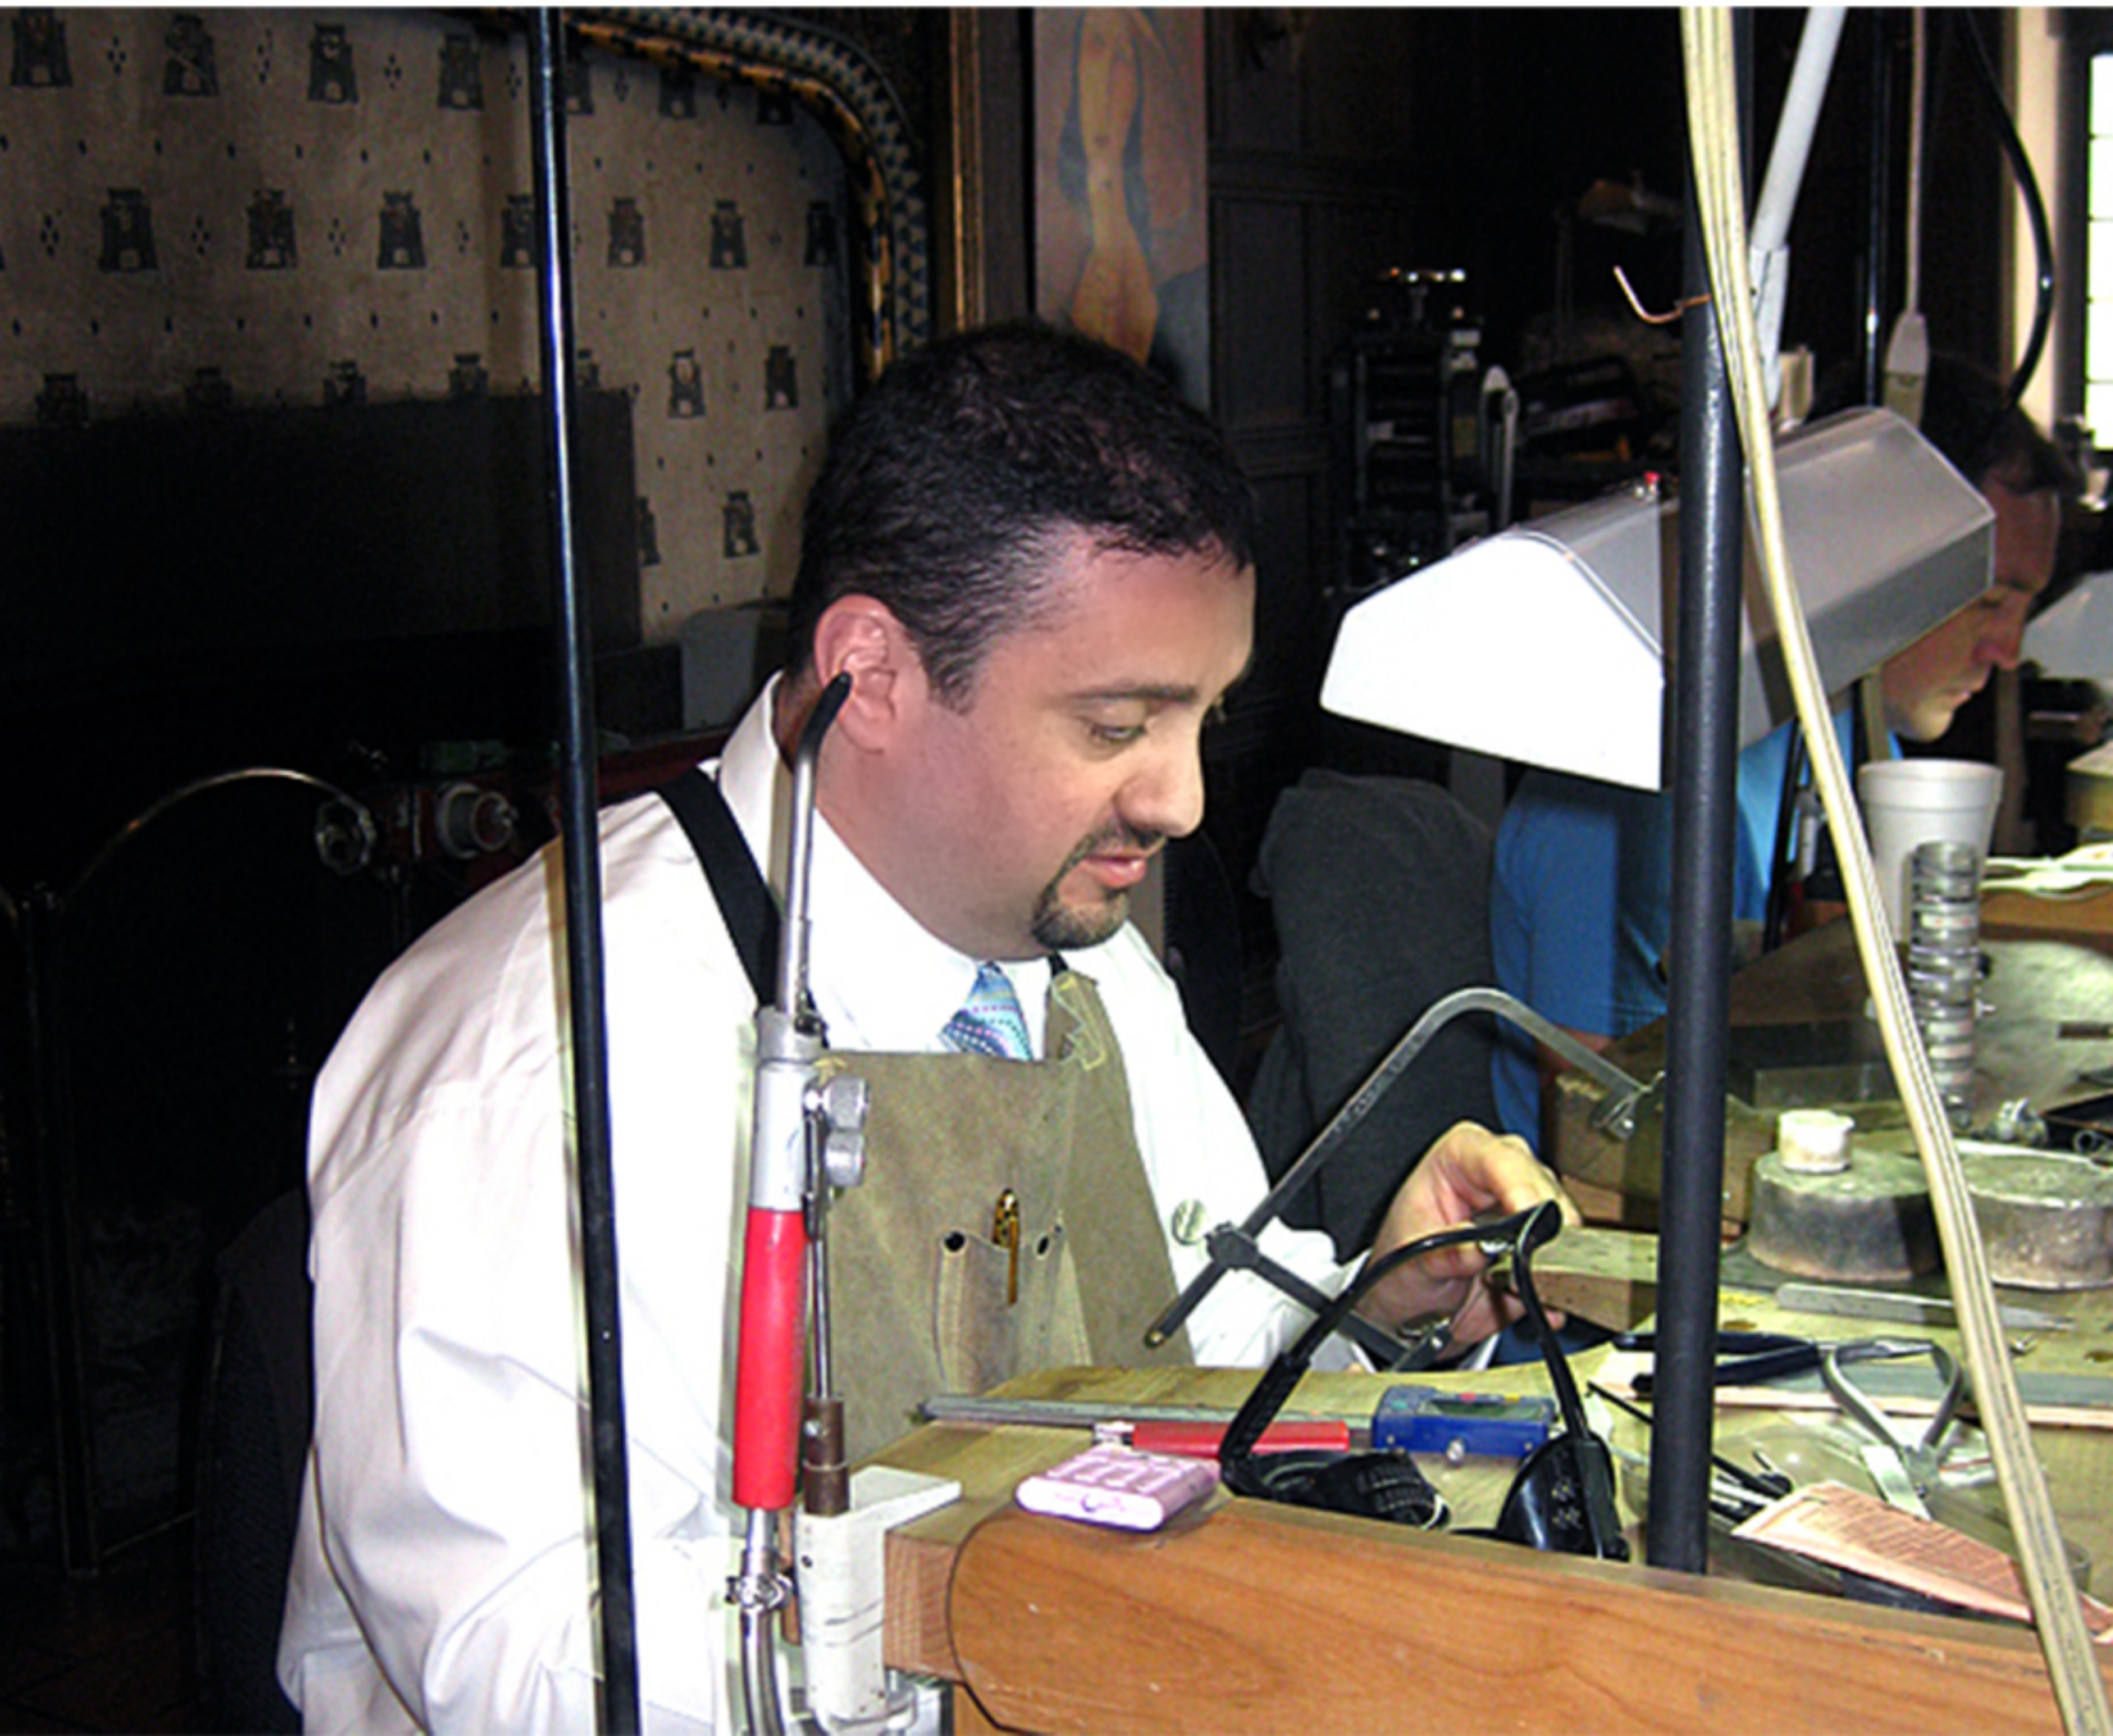

To simplify the purchasing process, this manual consolidates all essential policies and routines, eliminating the need to search across multiple web pages.

We are not your traditional retailers
Most of our clients work with us remotely and never need to visit our office in person. An in-person meeting is not required, as we communicate efficiently by phone, email, or WhatsApp. However, an in-person meeting is always an option.

Our operating hours are Monday through Friday, 9:00 AM – 5:00 PM. To comply with the strict security requirements of our Jewelers Block insurance, we cannot accommodate appointments outside of this schedule. **We are closed on weekends.**

These non-negotiable security measures are essential to protect valuable property and to ensure the safety of our clients and personnel. We are confident that you understand and support these precautions.

Timeframe

Precision forging takes longer than conventional production, and the exact timeframe depends on the ring's design and complexity. For example, a three-stone ring takes longer to produce than a solitaire.
Our average production time is 4 to 8 weeks, but we can deliver without delay if the job is completed ahead of schedule. We don't rush orders for an extra fee, as we believe in equal treatment for all clients.
While a simple project does not require eight weeks of bench time to fabricate, our schedule is intentionally padded to allow for meticulous finishing and refinement of the smallest details.

Here is why our work takes time:

1. The ring is made just for you. Never adjusted or tweaked from an existing design, but created from scratch. Every part of your vision is carefully considered, professionally deconstructed, and fully realized.
2. Assembling each part of the ring with absolute precision takes the time and patience that bespoke craftsmanship demands.
3. Each ring is handcrafted, not factory-made, and requires meticulous attention from our artisans: jewelers, setters, and polishers alike. While a machine-made ring can be produced quickly, speed often comes at the expense of elegance, character, and beauty.
4. The "human element" means that every job unfolds at its own pace, adding a degree of uncertainty to the timeline.
5. Urgency breeds compromise. We value referrals; every ring we create is our calling card. It has to be perfect without any reservations. We're not competing with fast fashion but with centuries of perfection.

Could it be done faster? Absolutely. Would it still be Leon Mege bespoke? No. It would simply be an OK ring. You are paying not only for our time, skill, and patience, but for the assurance that your piece is made without haste or compromise.

International orders

We regularly work with clients located outside the United States. While our overall process remains the same, there are a few minor differences when working across borders. To ensure a smooth, efficient, and reliable experience for everyone involved, we follow slightly different rules for international clients residing outside the U.S.

- All communication is conducted in English. We do not speak other languages, so we recommend using Google Translate or ChatGPT for assistance if needed.

- For overseas clients, we strongly prefer communicating via WhatsApp. This allows for seamless sharing of large files, high-resolution images, and videos, making the design and review process much more efficient. Our business WhatsApp number is +1 (917) 294-0230.

- Retainer payments must be made via wire transfer, as our credit card processor does not accept credit cards issued by foreign banks.

- We are able to ship to most international destinations. New York State sales tax is not charged on items sent to foreign locations.

- All shipping and handling costs are the sole responsibility of the client. The client is also solely responsible for any and all import duties, customs fees, local taxes, value-added taxes (VAT), or other charges, levies, or assessments imposed by the country or jurisdiction of destination.

- All prices are quoted and payable exclusively in United States Dollars (USD). We do not accept payment in any foreign currency.

We will supply all stones including the center stone. This is the way.

Whether you are looking for a super-ideal cut diamond with intense sparkle, a rare antique diamond, a royal-blue sapphire, a Burmese ruby, a Colombian emerald, or even a Windex-blue Brazilian Paraiba, we have the inside sources. We work directly with the same elite suppliers who source for Graff, Winston, VanCleef, and other top houses.

We supply all stones for each project and don't work with diamonds purchased elsewhere. This policy isn't about increasing profits. Our priority is finding the best possible stone for the job, even when our commission is minimal.

All natural diamonds, no matter where they are ultimately purchased, are listed in the same centralized industry database. Price differences for identical stones arise from variations in service, expertise, and overall presentation, rather than the stone's ownership. Much like real estate listings, diamond listings are open to anyone in the trade. The sad part is that, unlike real estate agents, diamond sellers are not required to have a license.

We hold full trade-level credentials, granting us comprehensive access to the global listing of certified natural diamonds. This level of access enables us to locate any diamond anywhere in the world and secure the exact stones our clients are looking for.

Properly selected diamonds result in better-looking rings. Since many of our clients come through referrals, it's essential that every ring we create is set with the most attractive center stone. Exceptional work speaks for itself and helps us earn future business from your family and friends.

We do make exceptions for heirloom stones with special meaning. This particulars of this policy is described in detail on our website.

We sell exclusively GIA-certified diamonds. Purchasing a diamond without a GIA certificate poses an immense risk. The GIA is the recognized standard in diamond grading, and its certificate is the only document accepted at face value by the trade.

Lab-grown diamonds are a popular alternative to natural diamonds, offering a similar aesthetic at a more accessible price point. We believe the choice between natural and lab-grown stones is deeply personal. While the final decision rests with you, we are fully equipped to supply and set high-quality lab-grown diamonds in our bespoke rings should you choose that path.

Whether you were referred by a previous client or found us through your own research, you are in good hands! Every ring is unique, so the process may vary somewhat. For most custom orders, the typical steps are:

- Initial request
- Price quote provided
- Phone consultation
- Retainer payment
- Center stone selection
- Purchase order signed and deposit paid
- Side stone selection (if applicable)
- Production begins
- Remaining balance paid
- Finished ring shipped

We'll cover each point in depth in the rest of this guide.

STEP 1

The most reliable way to reach us is by phone.
We can be reached by dialing +1 (212) 768-3868 during our regular business hours.
For detailed inquiries or longer discussions, we recommend booking a phone appointment.

To schedule a call, use the link below:
https://calendly.com/leonmege/appointment

Please note: we do not communicate via phone text messages.

Email can sometimes be unreliable, as messages may be filtered into spam or overlooked in a pile of junk mail. To ensure you receive our replies, please add info@leonmege.com to your email safelist.

We strongly prefer WhatsApp for client communication. This free app (available for iPhone or Android) lets us share high-resolution photos and videos. If you're new to WhatsApp, we encourage you to give it a try.

Our dedicated WhatsApp number is: +1 (917) 294-0230
This line is monitored by our entire office team and is used exclusively for WhatsApp messaging, not for domestic phone calls.

To inquire about any ring on our website, leonmege.com, visit the product page and send us a message using either the Email or WhatsApp button.

You may also take advantage of our comprehensive design questionnaire, conveniently located in the main menu at the top of our website. This form allows you to provide additional details about your preferences and gives you an option to upload an image of any design that has inspired you, helping us gain a clear, refined understanding of your vision.

Our prices are non-negotiable

Buying jewelry is a compulsive act of frivolous spending.

Our business is not a retail environment where prices are negotiated. Each quote reflects our best possible pricing, presented upfront without excessive markup left for bargaining. Our prices are not aspirational suggestions open to haggling.

Our pricing reflects the true cost of design expertise, craftsmanship, and carefully sourced materials, with a very reasonable profit margin applied equally to every job. Neither our clients' personal financial circumstances nor external factors affect pricing decisions. If a purchase does not fit comfortably within your budget, we encourage you to postpone it until the timing is right. We are running a business, not on a financial rescue mission.

- Is the rent overdue?
- Bad exchange rate?
- Lost a job?
- Expecting a baby?

We are not in the business of accommodating financial hardship. If a purchase does not fit your budget, we suggest postponing it.

Lab-grown vs. Natural Diamonds Policy

	Natural Diamonds	Synthetic
Origin	Formed in Earth crust over a billion years ago and brought to the surface by volcanic eruptions	Created artificially on the industrial scale using CVD or HPHT technology
Value	Defined by diamond's rarity, market demand based on diamond's iconic cultural resilience	Infinite supply, industrial scale production, nearly zero re-sale value
Appearance	Brilliance, fire, and scintillation, created by facets that reflect and refract light are main contributors	Chemically and physically identical including hardness, thermal conductivity, and specific gravity
Availability	Plentiful for diamonds below 1.5 carats, limited for 1.5-3 carats, increasingly rare over 3 carats;	Widely available in all sizes and shapes up to 20-carat in size, limited variety of 20+ carat stones
Cost	Prices increase exponentially as the quality improves and the stone size increases.	Extremely affordable, round shapes typically less expensive than fancy shapes.
Grading	4Cs assessment with a plotted clarity diagram D-to-Z color, provided by all major gem labs	"Premium" or "Standard" grading" by GIA; 4 C's certificate by IGI and GRS
Identification	Gem labs use advanced gemological equipment to analyze growth patterns, trace elements	Certificates from labs like GIA or IGI are the most reliable proof or testing with sophisticated devices
Ecology	"Blood diamond" myth debunked, along with claims of environmental impact of diamond mining	Marketed as environmentally friendly, while produced overseas under heavy polluting conditions
Shapes and cuts	Rounds are most popular, cushions, emeralds and ovals in demand, antique cuts are especially scarce.	Rounds, ovals and emerald cuts are in demand, vintage cuts are sold at a huge premium
Sweet spot	G-H/VS	D-F/VVS, no fluorescence
Supplied by	Sourced by Leon Mege, from well-established, vetted producers specializing in premium cuts	Personally sourced by Leon Mege from local resellers renowned for their ethical business practices and
Payment	50% deposit required	Full payment upfront required

Price match

We operate at the wholesale level and source diamonds directly from the producers. Every diamond we supply is 100% authentic and accompanied by a GIA grading report, the diamond industry's gold standard for grading and identification.

At the sole discretion of Leon Mege, we may consider matching the price of a diamond independently sourced by a client, provided the stone was not previously offered by us.

The competing offer must be straightforward and unconditional, free of any limitations or requirements to accept additional purchases or bundled items. The price must be publicly available to anyone without restrictions.

The price match guarantee applies only to unset, natural, GIA-certified diamonds offered by legitimate U.S.-based vendors such as BlueNile or James Allen.
All price match requests are subject to verification, unverifiable listings will be rejected. Prices from disreputable or unauthorized sellers, auction platforms, or private parties cannot be honored.

We reserve the right to approve or decline any price match or price adjustment at any time, without obligation or explanation.

No double-dipping please!

Our generous price-match offer is extended as a courtesy, not as a negotiating tool.
Competing offers received after we quoted the stone will be dismissed.

.

STEP 2

The goal of the initial quote is to illustrate the budget requirement. It will stay current until market conditions change. The goal is to help you assess financial feasibility before committing to the project. We provide a single preliminary estimate that encompasses both the center stone and the ring.
The quote is based on the overall scope of work and reflects the expertise, materials, and time required to deliver the finished piece to our standards. For this reason, **we do not provide a line-by-line cost breakdown.**

Precise pricing requires clearly defined specifications; in their absence, we provide a price range.

Sharing an approximate budget with us is essential to avoid recommending stones outside of your comfort range. Because our engagement rings are custom-made, we can tailor the overall cost to your preferences and present suitable options within your budget.

Following review of the initial estimate and completion of due diligence, the retainer confirms your intention to proceed.

STEP 3

Consultation
We look forward to speaking with you at our scheduled time.
To reach us, please dial **+1 (212) 768-3868.**
To ensure clear and effective communication:

- When calling, please choose a quiet location with good reception, or use a landline.
- Conference calls are welcome; please test the connection beforehand.
- In preparation for the call we review the information you've already provided so you don't have to repeat it again.
- Try to gloss over this guide before calling. It answers many frequently asked questions, allowing us to focus on the specific details that matter most to you.
- There is no time limit for our call. Please feel at ease and take your time to ask as many questions as you like. There are no dumb questions.

Design Philosophy & Technical Standards
To ensure the most efficient use of time, we address one project at a time and leave anything else for the future. Here are some key points to keep in mind:

Setting Height: By default, we set all center stones as low as possible, unless you explicitly request a higher setting.
Prong Styles:

- By default, we use "Eagle Claw" prongs for their elegance, strength, and minimal metal coverage, to allow for maximum stone exposure.
- Tiffany-style crown settings are typically tipped with tab or heart-shaped prongs.

Aesthetics vs. Durability: We favor delicate settings with minimal metal visibility to highlight the stone. No matter how delicate the ring, it is always durable, and all stones are secure.
Metal Quality: Our rings are crafted using premium Platinum or Gold alloys. Only 18K or higher gold alloys are suitable for precision-forging. White gold or any alloy below 18K does not provide the required workability needed for the meticulous craftsmanship our pieces demand.

Precision Measurement: We use exact millimeters and fractions for all measurements. To ensure accuracy, we avoid vague terms like "a little" or "a tiny bit."
Custom Styles & Replicas: We will create an upscale, improved version of any ring style rather than making an exact copy.
Wedding Band Fit: We strongly oppose a flush fit between a wedding band and an engagement ring. For once, it depends entirely on your choice of a wedding band. Secondly, modifying an engagement ring solely to achieve a tight fit compromises its structural and aesthetic balance. And it's also low-class.

STEP 4

Retainer

A retainer is a nonrefundable good-faith deposit. “Good faith” reflects the expectation that both parties act honestly, uphold commitments, and engage in the process without taking unfair advantage or imposing unreasonable demands.
We require a retainer because a thorough search and evaluation of diamonds takes time, expertise, and significant legwork.

The nonrefundable $400 retainer confirms your commitment to moving forward and is required for:

- In-person appointments
- Stone selection and design work
- Additional videos or photographs
- Unlimited custom quotes

The full amount is credited toward your purchase. You may pay the retainer by credit card with no additional fees, and it does not expire.

What the retainer includes

- Expert guidance throughout the stone selection process
- An itemized quote detailing stone and labor separately
- Access to stones from authorized vendors when price-matching is possible
- Professional advice and unlimited consultations
- Complimentary in-house appraisal

The retainer does not restrict your purchasing options or place you under unfavorable terms.

Why do we require a retainer?

Our work begins long before a ring is crafted. Sourcing diamonds is a time-consuming process that involves careful screening, comparison, and verification of each stone’s documentation, characteristics, and pricing. Unfortunately, in the past, some unscrupulous individuals took advantage of our work without any intention of compensating us for our efforts.

Because our selection and vetting process is meticulous, the retainer ensures that the effort invested in curating options for you is respected and appropriately supported. It enables us to continue providing the highest standard of service to all clients who value our craft.

Lab-grown diamonds are an inexpensive alternative to natural diamonds. Most are produced and cut overseas, then imported into the United States in bulk. Overseas manufacturers have become highly proficient at faceting standard shapes such as rounds or emerald cuts, but cutting specialty cuts, such as Antique cushions or French cuts, is their Achilles' heel.
As a result, round shapes are significantly cheaper than fancy shapes, especially antique cuts. It is the opposite of how natural diamonds are priced.

Applying the traditional 4C criteria (Carat, Color, Clarity, Cut) to lab-grown diamonds is both unnecessary and counterproductive. GIA discontinued this practice in December 2025, and other laboratories, including IGI, are expected to follow.

There is little justification for purchasing a low-grade lab-grown diamond, as approximately 95% of lab-grown stones fall within a narrow, high-quality range. Top-grade lab-grown diamonds are extremely affordable.

We supply and use two categories of lab-grown diamonds, in accordance with GIA standards:

- Premium grade - equivalent of D-E/VVS or higher
- Standard grade - equivalent of F–H/VS or higher

Our policies are different for natural and lab-grown stones:

Natural diamonds	Lab-grown diamonds
We supply all stones, except heirloom stones	All stones are supplied by us, no exception
Unlimited number of options to compare	One option at a time, one for each category
Total price is itemized after retainer is paid	Total price is quoted, take it or leave it
Initial purchase deposit is 50% of the total	Full payment upfront is required
Price match is available	Quoted price is final
Future upgrades are available (see policy section)	No upgrades

STEP 5

Center stone selection

Within a few days of receiving and confirming your retainer, we will provide the results of our market research by sending a curated list of potential stones, and we will wait for your feedback. It's a careful, time-intensive process in which we review, sort, and prepare each stone, verifying all documentation and pricing before presenting any options to you. A prompt response is important, as these stones are not placed on hold and can sell quickly.

We can search for diamonds using every grading detail listed in a GIA report, far beyond the basic 4Cs, and we have access to additional trade-only information not available to the public. This allows us to locate stones with exceptional accuracy and efficiency.
The initial list of potential stones usually includes up to a dozen options, depending on how many diamonds in your chosen category are on the market. Very detailed requirements yield only a few options because diamonds, after all, are a rare commodity. We will provide all necessary diamond information, including the GIA certificate numbers and total price. Timing is crucial because the stones have not yet been put on hold. Good matches may become unavailable at any minute.

Once you've filtered the most promising options, we'll bring in the selected stones for evaluation by our gemologist. We'll share our impressions, walk you through the pros and cons, and offer our professional recommendations. If you'd like to refine or update your criteria at any point, you're welcome to. We'll toss the list aside and start from scratch.

Long-distance clients receive photos and videos, typically via WhatsApp, our preferred method for sharing media, as soon as the stone is in our possession. For a personal visit to see and select the stones, we need at least a day or two of preparation time.

If you find a stone online that interests you, feel free to send us the link. For reputable sites such as James Allen or Blue Nile, we can typically locate the stone using its GIA certificate number. If the stone is located in the U.S., we can source it for you at the same or lower cost. A simple way to determine location is delivery time: overnight shipping usually means the stone is in the U.S.. In contrast, multi-day delivery typically indicates it is overseas, most often in India.

Sourcing diamonds internationally carries a higher risk, especially with the prevalence of lab-grown lookalikes, so we pursue overseas options only in extraordinary cases. Such a transaction will require a full payment up front, unlike purchasing a U.S.-based diamond that requires only a 50% deposit.

STEP 6

Purchase Order

Once you've confirmed your final selection, we will prepare a Purchase Order (PO) for your review and signature. The PO signifies your commitment to the purchase, and our commitment to begin production.
Please make sure to provide your out-of-state shipping address; otherwise, you will be charged the 8.875% NY sales tax. Also, please ensure you provide the purchaser's full name.

In most cases, the ring design is finalized prior to signing the PO and submitting the deposit. Certain designs, such as three-stone rings, require confirming the center stone first, with side stones and final design elements completed afterward.

The PO is sent to you in PDF format, and will include:

- Diamond description and certificate number
- Metal
- Brief description of the work
- Finger size
- Total price and deposit amount

We recommend giving everything a quick check, including diamond details, ring size, and any design notes, before signing. If anything requires clarification or a repeated review, please get in touch with us promptly.

A signed purchase order and payment are expected within 24 hours. Payments may be made via wire transfer, direct bank deposit, or Zelle. Please include your account number with each transaction to ensure proper matching.

Because each piece is custom-made, changes cannot be made once the order is signed. By completing your purchase, you acknowledge that you have read and accepted our policies, and understand that the order is final and non-refundable without exception.

STEP 6 CONTINUED

Whether discussing your project remotely or in person, our goal is to understand and reinterpret the client's wishes in clear, concise language that leaves no room for misunderstanding. Our job is to provide expert guidance, question unconventional request, and assist in decision-making. It is a client's job to be happy with the choices they made because custom projects cannot be changed once they are completed.

What to expect if you visit us in person?
We operate a workshop, not a retail store. We meet clients in a dedicated showroom equipped with materials and all necessary gemological equipment. There are no showcases to browse; all consultations are personalized, utilizing verbal description, images, and a few curated samples to discuss the commission. Hand-drawn schematic sketches will serve as visual aids to clarify specific points.

Creating an extraordinary custom ring is an exciting journey that thrives on mutual trust and clear communication.
We commit our expertise and creativity to bring your unique vision to life. In return, we ask for your trust in our process and our ability to deliver exceptional, one-of-a-kind results. This partnership means being open to the creative suggestions we offer as necessary steps toward achieving this goal.
We understand that committing to a design before seeing it finished requires a leap of faith. Custom work means creating something truly new, and that isn't the right fit for everyone. For those few who lack artistic vision, picking a prefabricated ring at a retail store may be a more satisfying route.

STEP 7

Side stone selection

Selecting side stones is a secondary but extremely important step in the construction of a three-or five-stone ring. Skip this step if you are in the market for a solitaire or a halo ring.

To ensure optimal fit and aesthetic harmony, side stones are selected only after the center stone has been purchased and its exact dimensions and characteristics are confirmed. This allows us to match the side stones precisely in size, color, faceting style, and light pattern.

Some guidelines
- Oversized side stones will make the center stone appear smaller
- Undersized side stones have an unbalanced look, as though the ring were designed for a much smaller center stone.
- Side stones are rarely certified; our suppliers provide their color and clarity grade.
- Side stones should not exceed the center stone in color grade; they generally look best when one to two grades lower, creating a cohesive visual match.
- With few exceptions, paired side stones should not differ from one another by more than 0.1 mm in length or width.
- Baguette side stones must share the same keel (elongated culet) dimensions and position to look identical.
- Diamond bullets and baguettes offer a similar aesthetic. However, bullets allow for a more refined and elegant shank.
- Fluorescent side stones should not vary in fluorescence level or color.
- We prefer strongly angled trapezoids, as they provide a smooth vanishing transition into the shank.

Because side stones must be photographed on a flat surface, they can't be shown at the exact angle and position relative to each other once they are set, so a bit of imagination is required to visualize the final look in the ring.

STEP 8

Production

Production begins promptly, with each ring meticulously handcrafted using the materials chosen specifically for your commission. Each ring is precision-forged entirely by hand. We do not share in-progress photos or previews during production. You'll see the finished piece once it's complete.

We specialize in precision-forging, the traditional technique that delivers unmatched structural integrity, refined detail, and enduring beauty.

Every bespoke ring we produce is from the ground up and meticulously crafted, typically in platinum, to fit the stone with absolute precision. Unlike "CAD customized" jewelry, often mislabeled as "high-end" or "bespoke", our precision-forged jewelry is truly special and unique.

While your ring is crafted, we encourage you to relax and avoid second-guessing the decisions you've already made. You're always welcome to check in with us, but please note that there aren't specific stages in the ring-making process that we can report on. Rest assured, your ring is our top priority, and we're giving it our full attention every step of the way.

We do not estimate the delivery date while the ring is still nearing completion. It gives us the flexibility to retrace our steps, go back, and perfect any part of the ring that does not meet our highest standards, without creating unnecessary stress for your planned proposal or your travel plans.

STEP 9

Final Payment

The remaining balance is due within 30 calendar days or upon completion of the ring, whichever occurs first. Orders shipped outide of New York state are **not** subject to sales tax.

Payments may be made via wire transfer, Zelle, or direct bank deposit. Please note that timely payment is required. Requests for extensive or highly specific photography cannot be accommodated; professional photography is not included in the price of the ring.

For international clients, all customs duties, taxes, and import fees assessed by your country are your sole responsibility. We do not provide guidance on these charges. Please consult your local customs office or relevant authorities for accurate information.

STEP 10

Shipping

We will contact you to reconfirm your delivery address and ensure that someone will be available to receive the package in person. You may revise the delivery address up to that point.

Once the delivery date has been confirmed and the shipping label has been created, no further changes can be made. You are responsible for any additional charges incurred due to unsuccessful delivery attempts.

A tracking number will be provided as soon as the shipping label is generated. While you may monitor the shipment's progress, we cannot guarantee an exact delivery time; for precise timing, please coordinate directly with the carrier.

Domestic shipping within the continental United States is complimentary. International shipments, as well as those involving heirloom stones, are not eligible for free shipping.

For your protection:

- Deliveries must be made to a physical residential or business address; no PO addresses are acceptable.
- An adult signature is required.
- Deliveries occur Tuesday through Friday; weekend delivery is not available.
- Items valued at $75,000 or more must be delivered to a verified business address or collected directly from the carrier's facility.

All packages are fully insured until the moment they are signed for. Please note that a concierge's signature constitutes package acceptance and ends insurance coverage.

Every bespoke ring is designed and crafted to reflect your individual taste, using your measurements, design choices, and selected stones. Once completed, the piece cannot be resold. If you are unsatisfied with anything other than craftsmanship in the finished ring, your only option is to repurpose the stone into a new ring at your own expense. Custom work is a final sale and cannot be returned or exchanged.

Lifetime Warranty
The Leon Megé name stands for uncompromising quality and craftsmanship. Our lifetime warranty covers all manufacturing defects, excluding damage caused by wear and tear, impact, friction, or misuse.
In the unlikely event of a manufacturing defect, repairs are performed promptly and at no charge. If a repair is impossible, we will remake the piece entirely.

Pavé Stones
Due to their delicate nature, pavé settings may lose stones through normal wear. This is not considered a manufacturing defect. Replacement is straightforward, with complimentary labor; clients are responsible only for the cost of the stones and shipping.

Cleaning
Regular cleaning prevents grease from building up under the stones. Once organic residue from makeup, lotions, and perspiration hardens, removal becomes difficult, even with professional equipment.
The best way to clean your ring is to gently brush it with a soft toothbrush using a solution of regular dishwashing liquid in warm water. Rinse off the soap and pat dry with a paper towel.

Service Guarantee
All our clients are entitled to complimentary professional cleaning and inspection. We will carefully examine the ring to ensure the stones are secure and the setting remains in good condition.
Regular TLC helps preserve both the beauty and longevity of your jewelry. You are welcome to bring your ring in whenever it needs attention.

We measure rings in **1/8-size increments** for a precise fit, whereas the jewelry industry typically relies on half- or quarter-size increments. Such precision reflects our level of craftsmanship and our commitment to a "bespoke fit" that accounts for the subtle nuances of human anatomy.

If you are unable to visit us for size fitting

Visiting a premier boutique such as Tiffany & Co., Harry Winston, or Graff to have your size measured is the most reliable alternative. Their sales staff is trained to provide reliable measurements. But even then, the results can vary depending on the individual technique, time of day, month, or season.

A few things to watch for:

- The correct size should allow the ring to slide off with moderate resistance, requiring a deliberate tug to pass over the knuckle, which is the widest part of the finger.
- On a fleshy finger, a ring that is too tight can create an unsightly bulge, which can be avoided by increasing the size by a few increments.
- The band's width matters. A wider shank will feel tighter than a narrow shank.
- There are several ring-sizing systems in use, with the most common being the U.S., French, British, and Japanese. Please refer to the conversion chart at the back of this booklet.
-

The incorrect size can be changed by resizing the ring. Initial minor resizing is complimentary; you are responsible only for shipping. Substantial sizing or adding sizing balls, shots, bullets, liners, etc., is done at an additional cost.

Resizing a ring is similar to a surgical procedure and should only be done when the size is clearly incorrect. If there is any uncertainty, the ring should be worn through a couple of seasons to account for natural seasonal changes in finger size.

Leon Mege, a master platinumsmith and award-winning designer, brings decades of experience crafting fine jewelry for leading luxury houses.

In addition to designing world-class engagement rings, Mr. Mege is uniquely skilled in crafting them at the bench by himself. His deep expertise in precision forging, along with his team of highly skilled professionals, distinguishes him from other jewelers.
